Retail Sales & Customer Analysis

Final reports

1.1 Monthly Sales Trend Analysis

Key Findings

The monthly sales analysis revealed fluctuations in revenue throughout the period 2010–2011. November 2011 recorded the highest monthly sales revenue of £1,509,496.33, while February 2011 recorded the lowest revenue of £523,631.89.

The difference between these two months was £985,864.44, meaning November's revenue was approximately 188.27% higher than February's.

Business Insights

The findings indicate that the business experienced varying levels of sales performance throughout the analysis period. November 2011 was the strongest-performing month, generating substantially more revenue than February 2011.

The considerable difference between the two months highlights fluctuations in monthly revenue and suggests that sales performance varied significantly during the period.

Although November recorded the highest revenue, further investigation would be required to establish whether seasonal demand, promotional activities or other factors contributed to this performance.

Business Recommendations

1. Investigate the factors that contributed to the strong sales performance in November 2011.
2. Examine February 2011's lower revenue to identify possible opportunities for improving sales performance during weaker periods.
3. Monitor monthly sales trends regularly to identify changes in revenue and support better business planning.
4. Use historical sales patterns to guide future marketing and promotional strategies.

Conclusion

The monthly sales analysis identified November 2011 as the strongest revenue-generating month, with £1,509,496.33, and February 2011 as the weakest, with £523,631.89. The revenue difference of £985,864.44 demonstrates substantial variation in monthly sales performance. These findings provide useful information for monitoring revenue trends and supporting business decisions.

1.2 Top 10 Products Analysis

Key Findings

The Top 10 Products analysis identified PAPER CRAFT, LITTLE BIRDIE as the highest-revenue product, generating **£168,571.60** in revenue.

On the other hand, HEART SHAPE WIRELESS Doorbell recorded the lowest revenue among the ten products, with **−£9,801.88**.

The difference between the highest and lowest recorded revenue was **£178,373.48**.

Business Insights

The findings show that revenue performance varied considerably among the top ten products.

PAPER CRAFT, LITTLE BIRDIE was the strongest revenue-generating product in the analysis. Its performance indicates that it made a substantial contribution to recorded sales revenue.

However, HEART SHAPE WIRELESS Doorbell recorded negative revenue. This suggests that the value of transactions classified as returns or cancellations exceeded its recorded sales revenue during the analysis period.

Negative revenue should not automatically be interpreted as a financial loss because the dataset does not contain product cost or profit information.

Business Recommendations

1. Monitor the sales performance of high-revenue products to understand their contribution to overall revenue.
2. Investigate the negative revenue recorded for HEART SHAPE WIRELESS Doorbell to understand the extent of returns and cancellations.
3. Review product-level sales and return patterns regularly to identify products requiring further attention.
4. Use product performance information to support decisions about marketing, product selection and sales planning.

Conclusion

The Top 10 Products analysis identified PAPER CRAFT, LITTLE BIRDIE as the highest-revenue product, generating £168,571.60, while HEART SHAPE WIRELESS Doorbell recorded the lowest revenue at −£9,801.88. The difference of £178,373.48 highlights substantial variation in product-level revenue performance. These findings can help the business monitor product performance and investigate unusual transaction patterns.

1.3 Top 10 Countries Analysis

Key Findings

The Top 10 Countries analysis identified the United Kingdom as the highest-revenue-generating country, with total revenue of **£9,003,097.96**.

Saudi Arabia recorded the lowest revenue among the ten countries displayed, generating **£145.92**.

The difference between the two countries was **£9,002,952.04**.

Business Insights

The findings reveal a substantial difference in revenue contribution across the countries included in the analysis.

The United Kingdom accounted for the largest share of revenue among the countries displayed, indicating that the business's recorded sales were heavily concentrated in this market.

In comparison, Saudi Arabia contributed a very small amount of revenue. This suggests that the business had a much smaller recorded sales presence in that market during the period analysed.

However, revenue figures alone do not explain why performance differed between countries. Further analysis of customer numbers, transaction volumes and market conditions would be needed to understand the reasons.

Business Recommendations

1. Continue monitoring the United Kingdom market because it represents the largest revenue contributor in the analysis.
2. Examine customer and transaction patterns across other countries to understand differences in sales performance.
3. Investigate opportunities for improving sales in markets with lower revenue contributions, where commercially appropriate.
4. Monitor geographical sales performance regularly to support market evaluation and business planning.

Conclusion

The Top 10 Countries analysis identified the United Kingdom as the strongest revenue-generating market, with £9,003,097.96, while Saudi Arabia recorded the lowest revenue among the countries displayed, at £145.92. The substantial difference of £9,002,952.04 demonstrates the concentration of recorded revenue in the United Kingdom. These findings provide useful information for understanding geographical sales performance and supporting market-related decisions.

1.4 Customer Analysis

Key Findings

The customer analysis identified Customer ID 14646 as the highest-revenue-generating customer, with total revenue of £280,206.02.

A review of the general customer ranking also identified Customer ID 13256, which recorded £0.00 in revenue.

The difference between the highest and lowest recorded customer revenue was £280,206.02.

Business Insights

The findings reveal differences in revenue contribution across the customer base. Customer ID 14646 generated the highest recorded revenue, making this customer a significant contributor to sales during the analysis period.

The zero revenue recorded for Customer ID 13256 indicates that the customer did not generate positive revenue under the sales calculation used. This observation may require further investigation to understand the customer's transaction history.

Business Recommendations

1. Monitor high-revenue customers to understand their purchasing patterns and contribution to overall sales.
2. Investigate customers with zero recorded revenue to understand their transaction history.
3. Analyse customer purchasing frequency and revenue contribution to identify opportunities for improved customer engagement.
4. Use customer-level analysis to support customer segmentation and sales planning.

Conclusion

The customer analysis identified Customer ID 14646 as the highest-revenue customer, generating £280,206.02, while Customer ID 13256 recorded £0.00 in the general customer ranking. These findings demonstrate differences in customer revenue contribution and provide a basis for further customer performance analysis.
